Internal Audit Report – Dubal Tech LLC

Audit Scope: The scope of this audit covers the information security management system (ISMS), Risk management process, and "Access Control of Dubai Tech LLC's AWS Cloud environment**."**

Audit Findings: The audit identified the following critical gaps in the current security framework:

1. **AWS Cloud Database lacks encryption.**

   (Risk Rating: Critical)

2. **MFA (Multi-Factor Authentication) is not enforced for all employees.**

   (Risk Rating: Critical)

3. **Backup restoration has never been tested.**

   (Risk Rating: Critical)

4. **System logs are retained for only 5 days.**

   (Risk Rating: High)

5. **Lack of security awareness training for employees.**

   (Risk Rating: Critical)

Recommendations:

To remediate the identified risks, management must implement the following controls:

1. Enable AES-256 encryption on AWS database immediately.
2. Enforce MFA for all 50 employees, especially admin accounts.
3. Schedule monthly backup restoration tests.
4. Increase log retention to at least 1 year.
5. Conduct mandatory phishing and security awareness training.

Conclusion:

Dubai Tech LLC currently has major security gaps that make it non-compliant with ISO 27001. Management must prioritize these remediation actions to protect customer data and pass the upcoming external audit**.**
